Decision Interface's founding vision was to provide measurable business results through the proper implementation of business processes and systems. We remain committed to that objective today. **For over 25 years, we have assisted our clients from coast-to-coast in achieving and exceeding their business goals and objectives.**

What sets DII apart from the many other successful consulting firms is more than our ability to deliver top-tier consulting. It is the way we approach each engagement as a partnership and consider it our responsibility to provide fresh perspective and identify new opportunities.

Our thorough understanding of the business challenges faced by our clients as well as our deep knowledge and expertise in tier-one business systems uniquely qualifies Decision Interface as a preferred services partner. For **Oracle** applications, there is no one better – **our team includes people who helped develop many of the consulting extensions to the Oracle application suite.**

Whether implementing an integrated ERP environment, designing asset accounts or assisting a client's assessment of their needs, wants and likes, we always keep an eye on the client's bottom line. We understand that the best results come through an open, engaged, collaborative process with the client – you. **Our measuring stick is the extent to which your expectations are exceeded.**

We'll work with you on a variety of projects and ongoing engagements including system implementations, upgrades, customizations, and system maintenance. Some of our recent work involving **Oracle** applications includes:

- Leading the functional implementation of **Oracle** eBusiness Suite for a utility in the southwest;
- Working with an Arizona utility on application changes and maintenance; and
- Implementing customized version of **Oracle's** Advanced Benefits for a Southern California healthcare provider.

Our objective every day is to place the right people on your team to clearly define issues, identify potential solutions, and implement the right answers to achieve the right results for your company. Decision Interface helps you face today's most complex technology challenges and increase return on your application software investment.

If you take the time to meet with us, you will find that our team is approachable, experienced and passionate about delivering honest, practical, sustainable value.

Give us a call at 858.350.6297 to demonstrate why clients work with Decision Interface again and again!
